## Suggested Use Case to Test ColPali

This document contains a complex table with structured data across regions and product lines over four quarters. It is designed to test ColPali's ability to detect tabular layouts, understand hierarchical data, and extract multi-dimensional relationships. Ideal tasks include:
- Identifying highest sales by region and product
- Calculating YoY growth by parsing column headers
- Extracting rows that match a specific condition (e.g., YoY Growth > 10%)
